# DISTRIBUTED NON-PARAMETRIC REPRESENTATIONS FOR VITAL FILTERING: UW @ TREC KBA 2014 

IGNACIO CANO - SAMEER SINGH - CARLOS GUESTRIN

## VITAL FILTERING (VF)

entities

documents

each doc

## VITAL FILTERING (VF)

We use two classifiers in cascade.

## Agenda

- METHOD
- EXPERIMENTS
- ACCELERATE \& CREATE
- CONCLUSION

## METHOD

- We need to predict whether a document contains novel information for an entity
- If we can "summarize" the contents seen for an entity
- We can compare the document to the entity's summary
- If similar, we have probably seen the information
- If dissimilar, it is novel -> predict VITAL
- How can we accurately and efficiently "summarize" all the documents that we have seen for an entity?

## BAG OF WORDS

word counts are simple to implement, often work quite well

- sparsity
"Barack was elected president today"
"Obama has won the election"
- size of representation grows over time

## WORD EMBEDDINGS

- Vector representations of words
- fixed length array of real values

Vfrance $=(0.002,0.2,0.4 \ldots .$.
$V_{\text {paris }}=(0.005,0.18,0.43 \ldots .$.

## WORD EMBEDDINGS

## DOCUMENT EMBEDDING

$e=$ Ted Sturdevant
$\mathrm{d}=\ldots$ So, it comes as good news that state officials are making significant progress in determining which chemicals pollute Puget Sound and in identifying where they come from. A report last week from the Department of Ecology casts a wide net over culprits. Most toxic chemicals are used in some way by all of us, said Ecology Director Ted Sturdevant. They are in our homes and gardens...

## DOCUMENT EMBEDDING

$\mathrm{e}=$ Ted Sturdevant
$d=\ldots$ So, it comes as good news that state officials are making significant progress in determining which chemicals pollute Puget Sound and in identifying where they come from. A report last week from the Department of Ecology casts a wide net over culprits. Most toxic chemicals are used in some way by all of us, said Ecology Director Ted Sturdevant. They are in our homes and gardens...

## DOCUMENT EMBEDDING

## e = Ted Sturdevant

Most toxic chemicals are used in some way by all of RBS JJ NNS VBP VBN IN DT NN IN DT IN
us, said Ecology Director Ted Sturdevant
PRP VBD NNP NNP NNP NNP

## DOCUMENT EMBEDDING

$\mathrm{e}=$ Ted Sturdevant

chemicals are used<br>NNS VBP VBN

said Ecology Director Ted Sturdevant
VBD NNP NNP NNP NNP

## DOCUMENT EMBEDDING

e = Ted Sturdevant
W=[chemicals, are, used, way, said, ecology, director, ted_sturdevant]
$\mathrm{V}_{\text {chemicals }}=f$ (chemicals)

$$
V_{\text {are }}=f(\text { are }) \quad V_{\text {said }}=f(\text { said })
$$

$$
V_{\text {used }}=f \text { (used) } \quad V_{\text {ecology }}=f \text { (ecology) }
$$

$$
V_{\text {way }}=f(\text { way }) \quad V_{\text {director }}=f \text { (director) }
$$

$\mathbf{v}_{\mathrm{d}}=1 /|\mathbf{W}|\left(\mathbf{v}_{\text {chemicals }}+\mathbf{v}_{\text {are }}+\mathbf{v}_{\text {used }}+\mathbf{v}_{\text {way }}+\mathbf{v}_{\text {said }}+\mathbf{v}_{\text {ecology }}+\mathbf{v}_{\text {director }}\right)$

## METHOD

- So far we have a representation for documents.
- To summarize what we have seen of an entity

$$
v_{e}=\frac{1}{\left|D_{e}\right|} \sum_{d \in D_{e}} v_{d}
$$

- Compare embedding of doc to entity's
- If close -> predict NON-VITAL
e=Obama

e=Obama

e=Obama

e=Obama

## MULTIPLE EMBEDDINGS FOR ENTITIES

- Use multiple embeddings to capture the different clusters of an entity.
- We propose an algorithm that:
- assigns each document to a single cluster,
- adaptively grows the number of clusters
- is efficient

## e=Obama

## e=Obama

## e=Obama

## e=Obama

## e=Obama

## e=Obama

METHOD

- Take embedding of document

Compare to all cluster vectors of an entity

- If close to ANY -> we have seen similar document
- If far from ALL -> document contains novel info

## METHOD

- Unfortunately this is not accurate
"Obama wins the presidential election" (2008)
"Obama wins his second presidential election" (2012)

METHOD

- Propose a staleness measure
- low staleness -> novel, freshness, vital
- high staleness -> old, stale, non-vital

STALENESS
p(vital)

STALENESS

p(vital)

## high

## STALENESS

- Take embedding of document
- Compare to all cluster vectors of an entity
- If far from ALL -> document contains novel info
- If close to ANY and LOW staleness -> VITAL
- If close to ANY and HIGH staleness -> NON-VITAL

## Agenda

- VITAL FILTERING
- METHOD
- EXPERIMENTS
- ACCELERATE \& CREATE
- CONCLUSION

## FEATURES

- Baseline
- Document Level
- log length and source of the document
- Document-Entity Level
- number and position of occurrences of entities in the document, etc.

## OUR FEATURES

## - Embedding

- embedding of document
- Clustering
- min and average distances between embeddings of document and clusters
- Temporal
- staleness of the entity
- staleness of the assigned cluster

$$

## Agenda

- VITAL FILTERING
- METHOD
- EXPERIMENTS
- ACCELERATE \& CREATE
- CONCLUSION \& FUTURE WORK

## VISUALIZATION

- Browser-based visualization prototype with interactive widgets
- Mainly for debugging purposes

## DOCUMENT VIEW

## CLUSTER VIEW

## Agenda

- VITAL FILTERING
- METHOD
- EXPERIMENTS
- ACCELERATE \& CREATE
- CONCLUSION

## CONCLUSION

- Semi-supervised model for document filtering tasks
- Low dimensional vector based semantics is useful for VF
- Non-parametric clustering can capture multiple aspects of entities
- Simple decay based temporal dynamics indicate novelty
- Official results show we are 2nd in Precision and 3rd in SU
- Follow up analysis suggests we are 2nd in F1 as well
